

- Section 1: this area will be very small. We can set it to about 3% of the total frame. The aim here is to align an app-link to the right, and the link will carry an image that can be clicked and specific page opens.
- Section 2:Image or Text will be uploaded here. Just like the Joyce Meyer’s app I showed you as an example. I don’t know the code you will use, but codes like this can be used to bring it in.

```
<a data-offline="false" data-params="value_id:5179" data-state="commercepro-  
category-list"></a></p>
```

- Section 3: At least 3 pages will be stack over each other here. Page 1 will be the default page that will be displayed. And the text “Page 1” (must be editable) will be bold. But once “Page2”is clicked, the page is revealed and the text “Page 2” becomes bold. Same for Page 3.

## NOTE

- Ability to dictate the background colour of the source code background.
